

StudyFlow **SEO** Implementation Plan

Real SEO strategy: from zero visibility to thousands of daily visitors — **v2.0**
(amended after review)

Phases 1–4

Last updated: June 2026

App: **studyflow.space**

Core insight: The SPA dashboard is invisible to search engines. “Thousands of daily visitors” comes from *content around the app* — landing pages and blog posts targeting study and productivity keywords.

This plan addresses the 6 issues raised in review: domain name collision, competitive keyword difficulty, templated blog workflow, immediate GSC setup, content quality standards, and multi-channel link building. The existing app is untouched.

Table of Contents

1. [Architecture Overview](#)
2. [Phase 1 — Foundation](#)
3. [Phase 2 — Landing Page](#)
4. [Phase 3 — Content Engine](#)
5. [Phase 4 — Link Building](#)
6. [File Change Summary](#)
7. [Keyword Targets \(Revised\)](#)
8. [Content Quality Standards](#)
9. [Timeline](#)

1. Architecture Overview

The current SPA serves `index.html` on every route. Search engines see the same empty shell — zero indexable content on non-root paths, only a bare title on the root. The fix: serve fully indexable static HTML at all marketing URLs and confine the SPA to `/app/`.

Target Architecture

```
studyflow.space/
├─ ← Landing page (fully indexable HTML)
├─ studyflow-focus-timer/ ← Branded-differentiation page
├─ pomodoro-timer/       ← Pillar SEO page: "Free Online Pomodoro Timer"
├─ focus-music/          ← Feature page: "Focus Music with Wallpapers"
├─ blog/
│   └─ pomodoro-guide/   ← Long-form blog content
│       └─ ...            ← 8-10 more posts
├─ embed/
│   └─ timer/            ← Embeddable widget for backlinks
├─ app/                  ← SPA (existing React app, untouched)
├─ sitemap.xml
└─ robots.txt
```

How Routing Works

URL	Serves	Source
/	Landing page	dist/index.html
/app/*	SPA (React app)	dist/app/index.html via _redirects
/studyflow-focus-timer/	Branded differentiation page	dist/studyflow-focus-timer/index.html
/pomodoro-timer/	Pillar SEO page	dist/pomodoro-timer/index.html
/blog/*	Blog posts	dist/blog/*/index.html
/embed/timer	Widget	dist/embed/timer/index.html
/robots.txt	Robots file	dist/robots.txt
/sitemap.xml	Sitemap	dist/sitemap.xml

Key enabler: `_redirects`

`public/_redirects` forwards `/app/*` to the SPA shell. Every other path serves the static HTML file at that exact path. This replaces the global "SPA fallback" toggle in the Cloudflare dashboard.

2. Phase 1 — Foundation WEEK 1

Six files changed. Zero app logic touched.

2A. Configure Vite to build into `/app/`

File	Change
<code>vite.config.ts</code>	Add <code>base: '/app/'</code>

Vite's `base` option prefixes all asset paths with `/app/`. Build output becomes `dist/app/` instead of `dist/`. This isolates the SPA from marketing pages.

Why no React Router change?

The app uses state-based routing (`mode / section`), not URL-based routing. No `BrowserRouter` or route config exists. The app simply lives at `/app/` and works exactly as before.

2B. Create `public/_redirects`

CREATE

```
/app/*    /app/index.html    200
```

2C. Create `public/_headers`

CREATE

```
/app/*
  X-Frame-Options: SAMEORIGIN
  Referrer-Policy: strict-origin-when-cross-origin

/*
  X-Content-Type-Options: nosniff
```

2D. Create `public/robots.txt`

CREATE

```
User-agent: *
Allow: /
Sitemap: https://studyflow.space/sitemap.xml
```

2E. Create `public/sitemap.xml`

CREATE

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url>
    <loc>https://studyflow.space/</loc>
    <priority>1.0</priority>
  </url>
  <url>
    <loc>https://studyflow.space/studyflow-focus-timer/</loc>
    <priority>0.9</priority>
  </url>
  <url>
    <loc>https://studyflow.space/pomodoro-timer/</loc>
    <priority>0.9</priority>
  </url>
</urlset>
```

Grows with each blog post.

2F. Downgrade Cloudflare Pages SPA setting

MODIFY

In Cloudflare Dashboard (Pages → studyflow → Settings → Build configuration), **disable** the “SPA fallback” toggle. The `_redirects` file now handles SPA fallback exclusively for `/app/*`.

2G. Google Search Console — Immediate Setup

NEW

CRITICAL

1. **Add property:** Go to search.google.com/search-console → add `https://studyflow.space`
2. **Verify ownership:** Use the DNS TXT record method (add a TXT record in your DNS provider for `studyflow.space` with the verification value Google gives you). This survives redeloys.
3. **Submit sitemap:** In Search Console → Sitemaps → enter `sitemap.xml`
4. **Request indexing:** URL Inspection tool → paste the landing page URL → “Request Indexing”
5. **Monitor:** Check Coverage report for crawl errors on the `/app/` SPA boundary within 48 hours

Why immediate GSC matters: Google discovers new sites faster when you manually submit. Crawl errors on the new `/app/` boundary can take weeks to surface in automated crawls. Requesting Day 1 indexing compresses the discovery cycle from 2–6 weeks to 1–3 days.

2H. Create Blog Template System

NEW

Rather than hand-crafting 10 HTML files, use a single template with variable replacement:

```
#!/usr/bin/env node
// scripts/create-post.mjs

import fs from 'fs';
import path from 'path';

const template = (title, description, date, slug, content) => `<!doctype html>
<html lang="en">
<head>
  <title>${title} – StudyFlow</title>
  <meta name="description" content="${description}" />
  <link rel="canonical" href="https://studyflow.space/blog/${slug}/" />
  <meta property="og:title" content="${title}" />
  <meta property="og:description" content="${description}" />
  <meta property="og:url" content="https://studyflow.space/blog/${slug}/" />
  <meta property="og:type" content="article" />
  <meta name="twitter:card" content="summary_large_image" />
  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "Article",
    "headline": "${title}",
    "description": "${description}",
    "datePublished": "${date}",
    "author": { "@type": "Organization", "name": "StudyFlow" }
  }
  </script>
</head>
<body>
  <article>
    <header>
      <h1>${title}</h1>
      <time datetime="${date}">${date}</time>
    </header>
    ${content}
    <footer>
      <hr />
      <p><a href="/studyflow-focus-timer/">Try StudyFlow Free</a></p>
    </footer>
  </article>
</body>
</html>`;

const [title, description, slug, wordcount] = process.argv.slice(2);
if (!title || !slug) {
  console.error('Usage: node create-post.mjs "Title" "Description" "post-slug"');
  process.exit(1);
}

const date = new Date().toISOString().split('T')[0];
const dir = path.resolve('public/blog', slug);
fs.mkdirSync(dir, { recursive: true });

// Write the template (author fills in ${content} later)
fs.writeFileSync(path.join(dir, 'index.html'), template(title, description, date, slug));
console.log('Created: public/blog/' + slug + '/index.html');
```

Usage: `node scripts/create-post.mjs "Title" "Description" "post-slug"` → generates the full HTML skeleton with schema markup, canonical URL, and correct path. You fill in the article body.

Why a template system?

Raw HTML for 10 posts means 10 separate files to update if you change your analytics script, footer, GA tag, or schema. One template updates all. No framework dependency needed.

3. Phase 2 — Landing Page WEEK 1

Replace the current shell `index.html` with a proper marketing landing page. Design: **light professional** with white/light backgrounds and indigo accent — like Notion or Linear — while the app inside `/app/` stays dark.

Landing Page Content Structure

Section	Content
Header	Logo + nav (Features, App link)
Hero	"Your Focus Studio" — headline differentiating from AI study tools + CTA to <code>/app/</code>
Preview	Original screen recording (GIF/MP4) showing the wallpaper-first experience
Features	4–6 feature cards: "Wallpaper-first focus", Pomodoro Timer, Ambient Sounds, Gamification, Analytics
Brand differentiator	"Not another AI study tool. A real focus environment."
CTA	"Start Focusing Free" button to <code>/app/</code>
Widget embed CTA	"Put StudyFlow on your site" — copy-paste embed code section
Footer	Links, copyright

SEO Elements

Element	Value
<code><title></code>	StudyFlow — Free Pomodoro Timer, Focus Music & Study Dashboard
<code><meta name="description"></code>	Boost your focus with StudyFlow's free Pomodoro timer, ambient sounds, task manager, and beautiful wallpapers. Track progress with gamification. No sign-up required.

```
<link  
rel="canonical">
```

```
https://studyflow.space/
```

Open Graph	title, description, image (1200×630), url, type: website
Twitter Card	summary_large_image
Structured data	WebApplication schema + FAQ schema (JSON-LD)

Branded Differentiator Page: </studyflow-focus-timer/>

NEW

There are multiple “StudyFlow” branded products (studyflow.ai, studyflow.courses, etc.). This page differentiates StudyFlow.space specifically as the **wallpaper-first focus environment** — not an AI study tool.

Target keyword: **“studyflow focus timer”** (branded, zero competition) + **“focus timer with wallpapers”** (long-tail, low volume but high conversion).

Content includes:

- “What makes StudyFlow different from other study apps”
- Comparison table: StudyFlow vs. other StudyFlow-branded tools
- Feature focus: wallpapers, zen mode, ambient sounds — the features competitors lack
- CTA to start the app

4. Phase 3 — Content Engine

WEEK 2-3

Each blog post is generated from the template system (Phase 2H). The `scripts/create-post.mjs` script generates the HTML skeleton. You fill in the article body. Cloudflare Pages serves them directly.

Revised Keyword Strategy

Change from v1: The original plan targeted broad, competitive keywords ("Pomodoro technique" 22K/mo) that a fresh domain cannot rank for in <12 months. The revised strategy focuses on **differentiated long-tail** and **feature-specific** keywords first, with competitive terms as aspirational targets for months 6+.

#	Post	Target Keyword	Volume	Difficulty	Timeline
1	Pomodoro Timer with Lofi Wallpapers (feature post)	"pomodoro with backgrounds"	~200/mo	Very low	Week 2
2	Study Focus Timer with Reward System	"focus timer with rewards"	~100/mo	Very low	Week 2
3	I tried 12 study tools for 30 days — here's what I built instead	"best study tools 2026"	3K/mo	Medium	Week 2
4	Wallpaper-First Focus: How Visual Environment Affects Studying	"study environment backgrounds"	~300/mo	Low	Week 2
5	What Is Zen Mode in Focus Apps	"zen mode focus app"	~400/mo	Low	Week 3
6	Free Pomodoro Timer Widget for Your Website	"free pomodoro widget"	~600/mo	Low	Week 3
7	Best Study Dashboard Features in 2026	"study dashboard"	1K/mo	Medium	Week 3
8	Ambient Sounds for Focus: What Science Actually Says	"ambient sounds focus science"	~500/mo	Low	Week 3

9	Beginner's Guide to Focus Timers (not another "Pomodoro Technique")	"focus timer beginners"	~400/mo	Low	Week 4
10	How to Customize Your Study Environment Online	"custom study environment"	~300/mo	Low	Week 4
—	Pillar: Free Online Pomodoro Timer	"pomodoro timer"	74K/mo	High	Month 6+

Strategy shift: Posts 1–10 target combined ~6.8K/mo of *achievable* keyword volume with near-zero competition. The 74K/mo "pomodoro timer" pillar page is deferred to Month 6+ when the domain has authority. Posts 1–10 collectively build the topical authority needed to eventually rank the pillar page.

Content Quality Standards

NEW

Requirement	Standard
Minimum length	2,000 words per post. Google's helpful content system correlates depth with quality. 800-word posts won't rank even for low-competition terms.
Original visuals	Every post must include at least one original screenshot or GIF of the StudyFlow app demonstrating the feature being discussed. No stock photos.
Heading structure	One <code><h1></code> , logical <code><h2></code> / <code><h3></code> hierarchy. Google uses heading structure for topic understanding.
Schema markup	<code>Article</code> schema on every post (included in template). <code>FAQ</code> schema on pillar and landing pages.
Internal links	Every post: 1 link to <code>/studyflow-focus-timer/</code> , 2–3 links to other blog posts, 1 link to <code>/app/</code> .
Publication date	Visible <code><time></code> element. Updated dates trigger Google recrawl.
Canonical URL	Set on every page (included in template). Prevents duplicate content issues.

Differentiated Content Angle

Do not write generic “Pomodoro Technique” guides (1000+ already exist). Write content **only StudyFlow can write**:

- **Founder story:** “I tried every study app for 30 days and built my own” — unique, authentic, shareable
- **Feature-specific:** “Pomodoro timer with lofi wallpapers” — zero competition, highly specific, matches exactly what StudyFlow offers
- **Comparative:** “StudyFlow vs Forest vs FOCUS” — comparison posts attract backlinks from the compared brands’ users
- **Visual focus:** “How background visuals affect study performance” — unique angle competitors don’t cover

5. Phase 4 — Link Building ONGOING

Change from v1: The original plan relied solely on the embeddable widget for backlinks. This version adds Product Hunt launch, tool directories, and community participation as primary channels. The widget is a bonus channel, not the only one.

5A. Product Hunt Launch WEEK 3

Task	Details
Listing page	Title: "StudyFlow — Beautiful Focus Timer with Living Wallpapers". Tagline: "The wallpaper-first study dashboard for deep focus. Pomodoro timer, ambient sounds, tasks, and zen mode — all floating on living wallpapers."
First comment	Founder story: "I built this because existing study apps are ugly and distracting. Here's what happened when I tried 12 of them in 30 days..." (links to blog post)
Assets	1 demo GIF (15s, showing focus mode with wallpaper), 4 screenshots, logo 240×240
Maker team	Add co-builders or friends to upvote day 1
Schedule	Tuesday or Thursday launch. Post on r/ProductHunt + Twitter 1 hour before go-live.

5B. Tool Directories WEEK 3-4

Submit StudyFlow to these directories. Every listing = a backlink + referral traffic.

Directory	Category	Backlink value
AlternativeTo	Productivity / Focus Timer	High (DR 80+)
Product Hunt	Productivity	High (DR 90+)
Slant.co	Study Tools	Medium (DR 70+)
Pomodoro Technique lists	Pomodoro timers	Medium (niche relevance)
Awesome List (GitHub)	awesome-pomodoro, awesome-productivity	High (GitHub DR 95+)

5C. Reddit Community Presence ONGOING

Genuine participation, not spam:

- **r/GetStudying:** Participate in discussions, offer StudyFlow as a tool when relevant. Post the 30-day study tool experiment.
- **r/Productivity:** Share focus tips and techniques (app is secondary). Build reputation first, then mention StudyFlow.
- **r/ADHD:** The wallpaper/zen mode focus features are genuinely helpful here. Post a “how I built a focus tool for my ADHD” story.
- **r/WebApps:** Show HN-style post with the app and what it does.

Reddit rule: 90% genuine participation, 10% self-promotion. A single well-written post that provides value (*“I tried 12 study apps for 30 days — here’s a spreadsheet of what I found”*) will drive more traffic than 10 link drops.

5D. Embeddable Widget WEEK 4

The widget from the original plan remains. It’s a passive backlink generator, not an active outreach channel.

Property	Value
File	<code>public/embed/timer/index.html</code>
Size	280 × 180 px, < 15 KB, no dependencies
Features	25-minute countdown, start/pause/reset
Click action	Opens <code>/app/</code> in new tab
Branding	“Powered by StudyFlow” footer

Embed code for other sites:

```
<iframe src="https://studyflow.space/embed/timer"
width="280" height="180" frameborder="0"
style="border-radius:12px;box-shadow:0 4px 24px rgba(0,0,0,0.1)">
</iframe>
```

6. File Change Summary

Total: 8 files created, 1 file modified, 0 files deleted. The app code is never touched.

File	Action	Purpose
<code>vite.config.ts</code>	MODIFY	Add <code>base: '/app/'</code> — SPA builds into <code>dist/app/</code>
<code>public/_redirects</code>	CREATE	SPA fallback for <code>/app/*</code> only
<code>public/_headers</code>	CREATE	Security headers
<code>public/robots.txt</code>	CREATE	Allow crawlers, point to sitemap
<code>public/sitemap.xml</code>	CREATE	Initial sitemap (grows with blog posts)
<code>public/index.html</code>	REWRITE	Landing page replaces empty SPA shell
<code>public/studyflow-focus-timer/index.html</code>	CREATE	Branded differentiation page
<code>public/embed/timer/index.html</code>	CREATE	Embeddable widget for backlinks
<code>public/pomodoro-timer/index.html</code>	CREATE	Pillar SEO page (deferred to Month 6+)
<code>public/blog/*/index.html</code>	CREATE	8–10 blog posts via template system
<code>scripts/create-post.mjs</code>	CREATE	Blog post skeleton generator

Build & Deploy (unchanged)

```
npm run build      # Vite builds to dist/
npx wrangler deploy # Deploys to Cloudflare Pages
```

All `public/` files are copied to `dist/` by Vite automatically. The output directory structure matches the URL structure exactly.

7. Keyword Targets (Revised)

Primary: Differentiated Long-Tail (Months 1–6)

Keyword	Volume	Content type
"studyflow focus timer"	Branded	/studyflow-focus-timer/
"pomodoro with lofi wallpapers"	~200/mo	Blog post + feature page
"focus timer with wallpapers"	~150/mo	Feature page
"focus timer with rewards"	~100/mo	Blog post
"zen mode focus app"	~400/mo	Blog post
"study dashboard"	1K/mo	Blog + landing page
"best study tools 2026"	3K/mo	Blog (30-day experiment)
"free pomodoro widget"	~600/mo	Widget page + blog
"study environment backgrounds"	~300/mo	Blog post
"custom study environment"	~300/mo	Blog post
"ambient sounds focus science"	~500/mo	Blog post
"focus timer beginners"	~400/mo	Blog post
Total achievable volume	~6.8K/mo	

Secondary: Competitive Targets (Month 6+)

Keyword	Volume	Prerequisites
"pomodoro timer"	74K/mo	Domain authority (DR 20+), 10+ backlinks, established topical relevance
"focus music for studying"	27K/mo	Embeddable widget adoption, backlinks from study blogs
"study with me"	40K/mo	Viral/trending content, Reddit community presence

Traffic Projection (Realistic)

Month	Estimated daily visitors	Source
Month 1	0–10	Direct, minimal organic discovery
Month 2	10–50	Long-tail organic, Product Hunt spike
Month 3	50–200	Content indexing, tool directory traffic
Month 6	200–500	Cumulative blog traffic, widget backlinks
Month 12	500–2,000	Pillar page ranking, sustained content output

Reality check: "Thousands of daily visitors" from SEO alone takes 6–18 months for a fresh domain with zero authority. The fastest path to "thousands" is **Product Hunt launch + tool directory listings + viral post** (which can drive 5K–50K visitors in a single day), while organic builds slowly underneath.

8. Content Quality Standards

These are non-negotiable for any content that should rank in 2026. The era of 800-word keyword-stuffed posts is over.

Dimension	Standard	Why
Word count	2,000–3,000 words per post	Google’s helpful content system favors comprehensive coverage. Short posts are classified as “thin” regardless of keyword targeting.
Original visuals	≥1 screenshot/GIF of the actual StudyFlow app per post	Stock photos signal low-effort content. App screenshots provide unique value and demonstrate expertise.
Heading structure	1 × <code><h1></code> , 3–5 × <code><h2></code> , logical <code><h3></code> per section	Semantic HTML structure is a direct ranking signal. Also improves readability and featured snippet eligibility.
Schema markup	Article schema (JSON-LD) on every post. FAQ schema on landing/pillar pages.	Enables rich results in SERPs (expanded snippets, FAQ carousels, “People also ask”).
Internal linking	Every post links to: <code>/studyflow-focus-timer/</code> , 2–3 other blog posts, <code>/app/</code>	Distributes page authority across the site, establishes topical clusters, and keeps users on your site longer.
Publication date	Visible <code><time datetime=“...”></code> on every page	Freshness is a ranking factor for “how to” and advice content. Updated dates trigger recrawl.
Canonical URL	Set via <code><link rel=“canonical”></code> on every page (included in template)	Prevents duplicate content penalties. Critical when the same content might be accessed via multiple URL variants.
Readability	Short paragraphs (2–4 sentences), subheadings, bullet points, bold emphasis	Google’s passage ranking indexes specific sections. Scannable content also reduces bounce rate, which is a UX signal.

Post-Writing Checklist

1. Run the template: `node scripts/create-post.mjs "Title" "Description" "post-slug"`
2. Write 2,000+ words of article body
3. Take 2–3 screenshots of StudyFlow demonstrating the topic
4. Add `<img>` tags with `alt` text including the target keyword
5. Add internal links (1 to branded page, 2–3 to related posts, 1 to `/app/`)
6. Verify `<title>` , `<meta name="description">` , canonical, schema are present in the HTML
7. Run `npm run build` to verify no errors
8. Deploy
9. Submit new URL to Google Search Console → URL Inspection → “Request Indexing”
10. Share on social (Twitter, Reddit, relevant communities)

9. Timeline

Week	Phase	Deliverable	Effort
Week 1	Phase 1 & 2	SPA moved to <code>/app/</code> , landing page live, <code>_redirects</code> + <code>robots.txt</code> + <code>sitemap.xml</code> deployed. Google Search Console added, sitemap submitted, index requested. Template system created. Branded page (<code>/studyflow-focus-timer/</code>) live.	3–4 hours
Week 2	Phase 3	Blog posts 1–4 published (feature-specific, differentiated content). Screenshots taken and embedded in each post. Internal linking structure established.	Content: 6–8 hrs; Tech: 30 min
Week 3	Phase 3 & 4	Blog posts 5–8 published. Embeddable widget built at <code>/embed/timer</code> . Product Hunt listing prepared (screenshots, demo GIF, launch post draft). Tool directory submissions started.	Content: 6–8 hrs; Tech: 2 hrs
Week 4	Phase 3 & 4	Blog posts 9–10 published. Product Hunt launch. Reddit community posts (30-day experiment, focus tips). Embeddable widget added to landing page.	Content: 4–6 hrs; Launch: 2 hrs

		Monitor Search Console weekly.	
		Update posts quarterly with fresh data/dates.	
Ongoing	Growth	Build backlinks (directory listings, guest posts, widget outreach).	1-2 hrs/week
		Prepare pillar page (Month 6+).
