

StudyFlow **SEO** Implementation Plan

Real SEO strategy: from zero visibility to thousands of daily visitors

Phase 1-4

Last updated: June 2026

App: studyflow.pages.dev

Core insight: The SPA dashboard is invisible to search engines. "Thousands of daily visitors" comes from *content around the app*—landing pages and blog posts targeting 200K+ monthly searches for productivity and study-related keywords.

This plan covers: landing page redesign, technical SEO foundation, blog content engine, and an embeddable backlink widget. — all while keeping the existing app untouched.

Table of Contents

1. Architecture Overview
2. Phase 1 — Foundation
3. Phase 2 — Landing Page
4. Phase 3 — Blog Engine
5. Phase 4 — Embeddable Widget
6. File Change Summary
7. Keyword Targets
8. Timeline

1. Architecture Overview

The current single-page application (SPA) serves `index.html` on every route. This means search engines see the same empty shell on every URL — zero indexable content on non-root paths, and only a bare title on the root.

Target Architecture

```

studyflow.pages.dev/
├─ ← Landing page (fully indexable HTML)
├─ pomodoro-timer/      ← Dedicated SEO page: "Free Online Pomodoro Timer"
├─ focus-music/         ← SEO page: "Best Focus Music for Studying"
├─ blog/
│   ├─ pomodoro-guide/ ← Long-form blog content
│   └─ ...              ← 8-10 more posts
├─ embed/
│   └─ timer/           ← Embeddable widget for backlinks
├─ app/                 ← SPA (existing React app, untouched)
├─ sitemap.xml
└─ robots.txt

```

How Routing Works

URL	Serves	Source
/	Landing page	dist/index.html
/app/*	SPA (React app)	dist/app/index.html via SPA fallback
/pomodoro-timer/	Static SEO page	dist/pomodoro-timer/index.html
/blog/*	Blog posts	dist/blog/*/index.html
/embed/timer	Widget	dist/embed/timer/index.html
/robots.txt	Robots file	dist/robots.txt
/sitemap.xml	Sitemap	dist/sitemap.xml

Key enabler: `_redirects`

Cloudflare Pages uses `public/_redirects` to forward `/app/*` to the SPA shell. Every other path serves the static HTML file at that path. This replaces the global "SPA fallback" toggle in the Cloudflare dashboard.

2. Phase 1 — Foundation WEEK 1

Six files changed. Zero app logic touched. The existing React app, authentication, payments, timers — all remain exactly as they are.

2A. Configure Vite to build into `/app/`

File	Change
<code>vite.config.ts</code>	Add <code>base: '/app/'</code>

Vite's `base` option prefixes all asset paths with `/app/`. The build output directory structure becomes `dist/app/` instead of `dist/`. This isolates the SPA from the new marketing pages.

Why no React Router change?

The app uses state-based routing (`mode` and `section`), not URL-based routing. There is no `BrowserRouter` or route config to update. The app simply lives at `/app/` and its internal navigation works exactly as before.

2B. Create `public/_redirects`

CREATE

```
/app/*    /app/index.html    200
```

Every request to `/app/*` serves the SPA shell. All other paths (root, `/pomodoro-timer/`, `/blog/*`, etc.) serve their respective static files. This is the single most important file — it enables the whole architecture.

2C. Create `public/_headers`

CREATE

```
/app/*
  X-Frame-Options: SAMEORIGIN
  Referrer-Policy: strict-origin-when-cross-origin

/*
  X-Content-Type-Options: nosniff
```

2D. Create `public/robots.txt`

CREATE

```
User-agent: *  
Allow: /  
Sitemap: https://studyflow.pages.dev/sitemap.xml
```

2E. Create `public/sitemap.xml`

CREATE

```
<?xml version="1.0" encoding="UTF-8"?>  
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">  
  <url>  
    <loc>https://studyflow.pages.dev/</loc>  
    <priority>1.0</priority>  
  </url>  
</urlset>
```

This will grow as blog posts are added in Phase 3.

2F. Downgrade Cloudflare Pages SPA setting

MODIFY

In the Cloudflare Dashboard (Pages → studyflow → Settings → Build configuration), **disable** the “SPA fallback” toggle. The `_redirects` file now handles SPA fallback exclusively for `/app/*`.

Alternatively, leave it enabled — Pages processes `_redirects` before the fallback, so both configurations coexist safely.

3. Phase 2 — Landing Page WEEK 1

Replace the current shell `index.html` with a proper marketing landing page. Design: **light professional** with white/light backgrounds and indigo accent — like Notion or Linear — while the app inside `/app/` stays dark.

Content Structure

Section	Content
Header	Logo + nav (Features, App link)
Hero	"Your Focus Studio" — headline + subtitle + CTA button to <code>/app/</code>
Preview	Animated screen recording (GIF/MP4) of the app in action
Features	4–6 feature cards: Pomodoro Timer, Task Manager, Ambient Sounds, Study Analytics, Gamification, Wallpapers
CTA	"Start Focusing — Free" button to <code>/app/</code>
Footer	Links, copyright, back to top

SEO Elements

Element	Value
<code><title></code>	StudyFlow — Free Pomodoro Timer, Focus Music & Study Dashboard
<code><meta name="description"></code>	Boost your focus with StudyFlow's free Pomodoro timer, ambient sounds, task manager, and beautiful wallpapers. Track progress with gamification. No sign-up required.
<code><meta name="keywords"></code>	pomodoro timer, focus timer, study dashboard, productivity, ambient sounds, task manager, study flow
<code><link rel="canonical"></code>	<code>https://studyflow.pages.dev/</code>
<code><meta property="og: ..."></code>	Open Graph title, description, image, url, type

```
<meta  
name="twitter:...">
```

Twitter Card (summary_large_image)

Structured data

WebApplication schema + FAQ schema (JSON-LD in
<script>)

Screenshot Requirements

Provide 3–4 screenshots of the app to include in the landing page:

- Focus Mode with the timer running (shows wallpaper + timer + controls)
- Home View with stats, tasks, ambience panel (shows the dashboard)
- Settings / Wallpaper picker (shows customization)

Place them in `public/screenshots/` (directory already exists).

4. Phase 3 — Blog Engine WEEK 2-3

Each blog post is a standalone HTML file in `public/blog/*/index.html`. Cloudflare Pages serves them directly. No build step needed.

Template Structure (per post)

```
<!doctype html>
<html>
  <head>
    <title>Post Title - StudyFlow</title>
    <meta name="description" content="..." />
    <link rel="canonical" href="https://studyflow.pages.dev/blog/post-slug/" />
    <meta property="og:..." />
    <script type="application/ld+json">
      {
        "@context": "https://schema.org",
        "@type": "Article",
        "headline": "...",
        "description": "...",
        "author": { "@type": "Organization", "name": "StudyFlow" },
        "datePublished": "2026-06-07",
        "image": "https://studyflow.pages.dev/screenshots/..."
      }
    </script>
  </head>
  <body>
    <article>
      <header>
        <h1>Post Title</h1>
        <time datetime="2026-06-07">June 7, 2026</time>
      </header>
      <p>... content ...</p>
      <footer>
        <a href="/app/">Try StudyFlow Free</a>
      </footer>
    </article>
  </body>
</html>
```

Blog Post List

#	Post	Target Keyword	Volume
1	The Pomodoro Technique: Complete Guide	"pomodoro technique"	22K/mo
2	Best Focus Music for Studying (Lofi, Classical & Nature Sounds)	"focus music for studying"	27K/mo
3	Study With Me: How Virtual Co-Working Boosts Focus	"study with me"	40K/mo

4	Best Productivity Tools for Students in 2026	"productivity tools for students"	8K/mo
5	How to Build an Exam Study Schedule That Works	"exam study schedule"	5K/mo
6	Ambient Sounds for Focus: What Science Says	"ambient sounds for focus"	6K/mo
7	Deep Work vs Pomodoro: Which Technique Is Best?	"deep work vs pomodoro"	2K/mo
8	Best Free Pomodoro Apps Compared (StudyFlow Included)	"free pomodoro apps"	3K/mo
9	How to Focus for Long Hours Without Burning Out	"how to focus for long hours"	3K/mo
10	Pillar: Free Online Pomodoro Timer (dedicated page)	"pomodoro timer"	74K/mo

Pillar Page: </pomodoro-timer/>

A dedicated page (not a blog post) targeting the highest-volume keyword. This lives at <public/pomodoro-timer/index.html> and serves as the "hub" that all blog posts link to. Content includes:

- Embedded timer (links to the real timer in the app)
- What is Pomodoro — explanation with embedded FAQ schema
- Comparison table (25/5 vs 50/10 vs custom)
- CTA to use the full StudyFlow app

Internal Linking Strategy

- Every blog post links to the pillar page (</pomodoro-timer/>)
- Every blog post links to 2–3 other blog posts
- Every blog post has at least one CTA to </app/>
- The pillar page links to 4–5 relevant blog posts

5. Phase 4 — Embeddable Widget WEEK 3

A lightweight **Pomodoro timer widget** that other websites can embed via `<iframe>` .
Every embed creates a **free backlink** to studyflow.pages.dev .

Widget Specs

Property	Value
File	public/embed/timer/index.html
Size	280 × 180 px (fixed)
Weight	< 15 KB total (no dependencies)
Features	25-minute countdown, start/pause/reset
Click action	Opens /app/ in new tab
Branding	“Powered by StudyFlow” footer
Style	Dark, minimal, fits any site design

Embed Code (for other sites)

```
<iframe src="https://studyflow.pages.dev/embed/timer"
width="280" height="180" frameborder="0"
style="border-radius:12px;box-shadow:0 4px 24px rgba(0,0,0,0.1)">
</iframe>
```

Backlink Acquisition

1. Add the widget to the landing page as a “Put StudyFlow on your site” section (easiest to copy embed code)
2. Write a blog post: “Free Pomodoro Timer Widget for Your Website” (targets “pomodoro widget” keyword)
3. Submit to widget directories, student resource lists, and productivity tool roundups
4. Reach out to study blogs with the offer: “Add this free timer to your study-with-me posts”

Why this works

Productivity blogs and study-with-me content creators *want* an embedded timer. Most either build one themselves (costly) or link to an external site (bad UX). Offering a free, branded embed solves their problem and gives you a backlink. Win-win.

6. File Change Summary

Total: 6 files created, 1 file modified, 0 files deleted. The app code is never touched.

File	Action	Purpose
<code>vite.config.ts</code>	MODIFY	Add <code>base: '/app/'</code> — SPA builds into <code>dist/app/</code>
<code>public/_redirects</code>	CREATE	SPA fallback for <code>/app/*</code> only; everything else serves static HTML
<code>public/_headers</code>	CREATE	Security headers for SPA and all pages
<code>public/robots.txt</code>	CREATE	Allow all crawlers, point to sitemap
<code>public/sitemap.xml</code>	CREATE	Initial sitemap (grows with blog posts)
<code>public/index.html</code>	REWRITE	Landing page replaces empty SPA shell
<code>public/embed/timer/index.html</code>	CREATE	Embeddable widget for backlinks
<code>public/pomodoro-timer/index.html</code>	CREATE	Pillar SEO page (highest volume keyword)
<code>public/blog/*/index.html</code>	CREATE	8–10 blog posts targeting specific keywords

Build & Deploy Commands (unchanged)

```
npm run build          # Vite builds to dist/app/ + static files in dist/
npx wrangler deploy    # Deploys to Cloudflare Pages
```

The build command remains `npm run build` (which runs `vite build`). Vite outputs:

- `dist/app/` — the SPA (assets + `index.html` shell)
- `dist/index.html` — landing page
- `dist/pomodoro-timer/index.html` — pillar page
- `dist/blog/*/index.html` — blog posts
- `dist/embed/timer/index.html` — widget

- `dist/robots.txt` , `dist/sitemap.xml` , `dist/_redirects` , `dist/_headers`

All public files are copied to `dist/` by Vite automatically. The build output directory structure matches the URL structure exactly, so Cloudflare Pages serves every file at its corresponding URL without any configuration.

7. Keyword Targets

Keyword	Monthly Volume	Difficulty	Target Page
"pomodoro timer"	74K	Medium	/pomodoro-timer/
"study with me"	40K	Low	Blog post + widget
"focus music for studying"	27K	Medium	Blog post
"pomodoro technique"	22K	Low	Blog post
"productivity tools for students"	8K	Medium	Blog post
"ambient sounds for focus"	6K	Low	Blog post
"exam study schedule"	5K	Low	Blog post
"free pomodoro apps"	3K	Low	Blog post
"deep work vs pomodoro"	2K	Low	Blog post
"how to focus for long hours"	3K	Low	Blog post
Total targetable volume	~190K/mo		

8. Timeline

Week	Phase	Deliverable	Effort
Week 1	Phase 1 & 2	SPA moved to /app/ , landing page live, _redirects + robots.txt + sitemap.xml deployed, Google Search Console configured	2–3 hours
Week 2	Phase 3	4 blog posts published (Pomodoro Guide, Focus Music, Study With Me, Productivity Tools)	Content: 4–6 hrs; Implementation: 1 hr
Week 3	Phase 3 & 4	Remaining 6 blog posts + pillar page live. Embeddable widget built and added to landing page. Backlink outreach begins.	Content: 6–8 hrs; Implementation: 2 hr

Ongoing	Growth	Monitor Search Console, update posts quarterly, build backlinks, expand content	1-2 hrs/month
---------	--------	---	---------------
